

The tools to measure quality and ensure a defect free supply chain.

## Quality Related Services Offered

- Supplier auditing and Inspection
- Evaluation of new or proposed suppliers
- First article Inspection and 3<sup>rd</sup> party article evaluation
  - Destructive and Nondestructive examination
- Risk Management assessments
- Supplier benchmarking
- Root Cause Analysis
- Failure Mode Analysis
- Supplier troubleshooting
- Quality system revision
- In-field or supplier monitoring
- Management of In-field retrofits/repairs

## Purchasing with Quality in mind

- Component manufacturing cost evaluations
- Component cost reduction and improvement
- Welding process optimization
  - Own your critical process quality info
  - Mitigate project risk

## **About Applications Technologies Company**

Applications Technologies Company (ATC) is the premier welding engineering enterprise in the US. Established to offer engineered welding and manufacturing solutions, our mission is to provide clients with the technical concepts and tools necessary to assist them in achieving and maintaining global competitiveness. Areas of expertise include: welding process selection and optimization; consumable selection; component design for manufacturability; weld quality planning and improvement; supply chain quality management; interpretation and application of welding standards; mechanical testing; nondestructive examination; and automated welding equipment design, fabrication and implementation. With more than fifty years of combined welding engineering and fabrication experience, ATC offers the most cost-effective approach to application of welding and manufacturing technology to maximize your company's bottom line.
